PROFESSIONAL SUMMARY

Aspiring Full-Stack Engineer with a strong foundation in Python backend development, AI/ML integration, and secure API architecture. Built a production-ready file integrity system using cryptographic hashing and a functional automated trading bot for Binance Futures. Certified in Emerging Technologies by IIT Roorkee. Seeking an entry-level role or internship to apply backend engineering and applied ML skills to real-world systems.

TECHNICAL SKILLS

Languages: Python (Advanced), C++, SQL, JavaScript (Intermediate)

Backend & APIs: FastAPI, RESTful API Design, Swagger/OpenAPI Documentation

Frontend: HTML5, CSS3, Tailwind CSS

Databases & Security: PostgreSQL, SQLite, SQLAlchemy, SHA-256 Cryptographic Hashing

AI/ML & NLP: Scikit-learn, TF-IDF, Vector Similarity Scoring, Streamlit

Tools & DevOps: Git, GitHub, Docker, Linux, VS Code, File I/O

KEY PROJECTS

Secure File Metadata API | FastAPI, PostgreSQL, SQLAlchemy

- Built a backend system to store and verify file metadata with a focus on data integrity.
- Implemented SHA-256 cryptographic hashing to generate unique file fingerprints and detect unauthorized tampering.
- Engineered file deduplication logic and auto-generated API documentation via Swagger UI.

Laundry Order Management System | FastAPI, SQLite

- Built an end-to-end order management tool to handle the full customer and garment order lifecycle.
- Designed a real-time revenue dashboard and multi-filter search for customer and garment tracking.
- Optimized database queries to speed up daily business reporting.

AI Resume Screening Web Application | Python, Scikit-learn, NLP

- Built a full-stack ranking application that automates candidate shortlisting against job descriptions.
- Developed a scoring engine using vector-based similarity (TF-IDF) to rank candidate fit.
- Implemented text extraction and structured skill parsing from resumes using NLP techniques.

Binance Futures Trading Bot | Python

- Built a CLI-based trading bot to execute Market and Limit orders on the Binance Futures Testnet.
- Implemented secure API credential management and robust logging for real-time order tracking.

Persistent Banking System | C++

- Built a CLI banking application with real-time balance management and transaction logic.
- Used File I/O (fstream) to persist account data across sessions.

CERTIFICATIONS

- Emerging Technologies — IIT Roorkee (2026)
- Web Development Fundamentals — IBM SkillsBuild (2025)
- ChatGPT Bootcamp — LetsUpgrade / NSDC (2025)

EDUCATION

B.Tech, Computer Science (Artificial Intelligence & Machine Learning)
Uttarakhand Technical University — Expected Graduation: 2028
